

I am new to Satellite Radio and already I prefer it to the local broadcasts. Because it provides clear signals while I am traveling between cities that means I can receive real-time traffic reports that are a big help when the expressway is blocked. With local casts, you have to find the station with the current report. In most cases, there are no radio reports to be found. The same applies to weather, if it turns bad what station do you tune in. Satellite Radio does provide some safety information in that ?it? can be found in one location. Therefore, Please REJECT the NAB?s Petition 04-160 and support Satellite Radio: Also, it is a service that I pay for. It is time for Satellite Radio, in addition to the local stations.

Thank-you
